

Neutron Reflectometers - a bibliography

Adrian R. Rennie

Background

A short catalogue of neutron reflectometers has been made available on the world wide web for a number of years by Rennie:

<http://www.reflectometry.net/reflect.htm>

The list has given only brief information about sample geometry and the scattering plane, whether polarised beams are available and the modes of operation (monochromatic at a defined wavelength or time-of-flight measurements with a polychromatic beam). The catalogue has also provided links to web pages that give more detailed information about specific instruments. The web pages that are maintained by neutron facilities often provide detailed, updated technical data for the instruments, as well scientific results and information about the procedures for users to apply for access.

Journal Literature

A separate valuable source of further information in this area is provided by papers in scientific journals. These often give more detailed descriptions and explain the motivation for particular designs of instruments. The archive of scientific papers also provides information about instruments that have been decommissioned that is not easy to find as web pages are updated or removed. Reading this literature can give a good perspective on the evolution of the design of neutron reflectometers.

The papers listed in this bibliography are restricted to scientific journals rather than internal laboratory reports. Although these papers are widely available in academic libraries to assist access, apart from the usual citations, where possible, the digital object identifier (DOI) has been provided to give hyperlinks to the full text of the papers. This access usually requires a paid subscription. The facilities and instruments are also identified. The list is available sorted either by date or by instrument name.

http://www.reflectometry.net/biblio/Neutron_reflectometer_bibliography_date_sort.pdf

http://www.reflectometry.net/biblio/Neutron_reflectometer_bibliography_instrument_sort.pdf

The papers included in the list are not necessarily comprehensive but rather come from personal reading. However I will be very pleased to receive information about corrections or suggestions for updates.
